

Budget

Minicontroller

Raspberry Pi 5 - approximately 100 eur

Sensors

We are currently taking into consideration using pressure sensors, but it might mean higher costs and more complex logistics. For those reasons, we will prioritise using distance sensors for now.

distance sensors - approximately 35 eur/piece

*depending on how large the installation is allowed to be, we estimate that 3-4 sensors would be enough, but this might change depending on the location circumstances

Speakers

approximately 20 eur/pair

*depending on how large the installation will be, we estimate that 2-4 pairs would be enough

More accessories will be needed, such as cables and other small parts, but for now these are the more important components.
